

Klimato & Coolfood

Promoting robust data to scale sustainable meals & food emissions reporting.

Klimato and Coolfood – an initiative of World Resources Institute (WRI) – share a commitment to ensuring credible, accurate data that helps the food service industry reduce its emissions. WRI has undertaken a comprehensive review of Klimato’s carbon footprint methodology and validated that it meets the requirements under the WRI Coolfood Methodology. By undertaking this peer-review, Klimato and Coolfood are ensuring that clients are accessing more robust, science-led data. As part of the collaboration between Klimato and WRI’s Coolfood initiative, Klimato is also endorsing the Coolfood Pledge – a science-based target to reduce emissions by 25% by 2030.

The Coolfood methodology from World Resources Institute is aligned with the Science Based Targets Initiative and the Greenhouse Gas Protocol [link to one pager [Coolfood alignment with GHG protocol and SBTi](#)]. For more information about the Coolfood methodology see technical note [link to [Coolfood technical note](#)].

Yearly methodology reviews are carried out by Coolfood to ensure that Klimato’s methodology continuously meets the requirements under the WRI Coolfood Methodology. The latest review was carried out in February 2025.

About Coolfood

Coolfood – World Resources Institute’s initiative for curbing diet-related emissions – provides the food service industry with the tools and expertise to reduce emissions by 25% by 2030. We combine deep environmental research with expertise in behavioral science and consumer marketing techniques, all in a one stop shop that allows the food service industry to turn its ambition into action. Our members span food service companies, hotels, restaurants, hospitals, cities, and universities predominantly across Europe, North America, Latin America, Asia, and Australia. *Read more at: <https://coolfood.org/>*

About Klimato

Klimato helps food businesses become more sustainable, supporting them as they move closer to their climate targets. With its data-driven approach, Klimato provides a tool for any business with a food and beverage offering – from hotels and restaurants to corporates and food producers – to calculate, report and reduce their food-related climate impact, offering bespoke support on sustainability strategy, and carbon labeling and regulation compliance. *Read more at: <https://klimato.com/>*
